## Dear collectors,

Passion and pleasure are two terms that have linked us, at LIGHTHOUSE, with our accessories for more than 100 years. More than 6,000 products now bear the LIGHTHOUSE brand name, which has become a symbol of practicality and quality. We're particularly proud of our latest range of products, new for 2022.

Gold has gained worldwide popularity since the onset of the financial crisis and is becoming increasingly attractive to more and more investors. However, there are a number of silver coins, such as the Canadian Maple Leaf or the Austrian Vienna Philharmonic, that have also become all-time bestsellers. In order to reflect the importance of this, we are devoting significantly more space to **gold and silver coins** in this edition of our catalogue and are delighted to present four new VOLTERRA presentation boxes to you.

The new LIGHTHOUSE **ULTRA Perfect Fit premium coin capsules** are *tailor-made* for many of the most common coins. These capsules are available for both the most prevalent bullion coins and all euro coins – their perfect measurements enabling the coins to sit snugly, with no wobble.

We're constantly coming up with new, original and useful products to complement your hobby. Your feedback is very important to us. Please continue to support us with your comments, suggestions and even criticisms.

Everyone needs to have a passion for something!

We hope you enjoy browsing our coin accessories catalogue.

On the following pages, you will find a coloured section on the right-hand margin which indicates the colour of the respective category. This means you will be able to recognise immediately which category you are looking at. ## Silver coins – in a league of their own!

“Gold’s little brother” has stood in the shadow of the world’s most famous precious metal since time in memoriam, yet it has managed to break free from this of late and is striking out well on its own. Most bullion coins that had become popular in gold now also have a silver variant – the “Krügerrand”, for example, released in gold in 1967 was re-released as a silver investment coin in 2018. Other such coins include the Canadian Maple Leaf, the Austrian Vienna Philharmonic and the Australian Kangaroo.

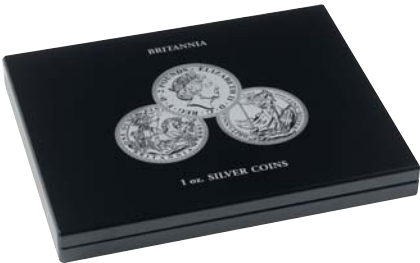

Silver has become particularly popular with investors due to its affordability, even for those with a smaller budget, meaning it could easily catch up in popularity with gold as a worthwhile investment. It is usually purchased by the ounce, but silver bars are also available. Differential taxation means that coins produced outside the European Union can be sold particularly cheaply. Investors get the most silver for their money by investing by using classic investment ounces. This is because bullion coins weighing one ounce are produced in larger quantities and the price premium for minting them is extremely low. Indeed, common circulation coins have been minted in silver for millennia, as the precious metal fostered confidence and provided stability. It is only since the 1970s that countries across the world have been economising and relying instead on base metals when producing their coinage, with the result that currencies such as the euro or the American dollar are losing their credibility, not least due to their extensive use of money printing press. A silver coin, however, is recognised across the globe, regardless of the currency it has been struck in.

To ensure that collectors and investors can enjoy their silver coins for a long time to come, the LEUCHTTURM range includes a wide range of accessories – with the right storage and the proper equipment, your silver coins will have a bright future!

**Lunar III:** It's quite rare for a coin set to be issued multiple times. However, the Lunar series from Australia has become such a great success that the Perth Mint issued a third series featuring animals from the Chinese lunar calendar. The first Lunar III series, depicting the mouse, was released in 2020. Produced in gold, silver and platinum, the Australian "Lunars" are strictly limited edition and have thus become highly sought-after collector's items.

**Queen's Beasts:** Queen's Beasts: Who'd have thought that a coin set featuring British heraldic animals would become such a huge success? The Royal Mint's "Queen's Beasts" coins took the bullion world by storm – between 2016 and 2021, a total of eleven coins were issued, each bearing the mark of a particular aristocratic estates. In the meantime, collectors and investors all over the world seem to be experiencing Royal fever and are exploring British genealogy on these splendid gold, silver and platinum coins.

## Here's why you should collect gold coins!

Currencies, rulers and nations have come and gone, but gold has endured – as a perpetual currency. The shiny yellow metal is famous and serves as inspiration – not only collectors around the world, but to investors in search of a “safe haven” too. Gold has gained popularity in Germany since the onset of the global financial crisis and is becoming increasingly attractive to more and more investors.

The first investments into this precious metal were made in 1967. South Africa conducted a bold and risky experiment, introducing the Krugerrand, a gold coin with no face value, which became a worldwide success. Since then, the springbok has become the veritable epitome of investment in precious metals. Indeed, lots of other countries, such as Canada (Maple Leaf), USA (American Eagle) and Austria (Vienna Philharmonic), have also followed suit and are not far behind. All are classed as ‘bullion coins’ that are minted specifically for the investor, but which also enjoy official currency status. This is a quality that demonstrates additional trust. Besides bullion coins, however, collectors' coins made of gold are also very popular – gold coins had been considered taboo in Germany until 2001, but the country now plays a leading role in minting gold coinage. With magnificent motifs and weights in every price bracket, coins from the German Mint appeal to both investors and collectors alike. Whether a gold coin is intended for entry into a private collection or is sent to a precious metal depot, high-quality accessories are essential for preserving its value in the long term. This is because both bullion coins and historical collector's items should be in pristine condition if they are to fetch the best price at auction or when sold. Safe storage and the proper maintenance of both the modern Krugerrand and German Empire gold are, therefore, highly recommended to ensure that gold continues to fulfil its function as currency protection for generations to come. Accessories for the most popular gold coins are found on the following pages.

## Pressed Pennies

A vending machine that was able to roll oval-shaped coins was presented for the first time at the World's Columbian Exposition held in Chicago in 1892/93. These elongated coins, or pressed pennies, soon became known as souvenir coins in Germany. Since then, many tourist attractions worldwide have been using these vending machines to press their own souvenir coins. The colour of the coin inserted into the machine dictates the colour of the souvenir coin.

Our Pressed Penny pocket albums are ideal holiday companions, as your collection of souvenir coins serves as a unique kind of travel log.

### “Euro Souvenir” banknotes

The concept of the “Euro Souvenir” banknote was introduced in 2015. These banknotes are sold at vending machines, or either at the reception desk or in the souvenir shops at museums, amusement parks or other tourist attractions. They are now available in many countries and are quite sought after by collectors. “Euro Souvenir” banknotes are manufactured in the same printing works that print genuine euro banknotes. They have some of the security features typical of real currency and are printed on special security paper. Each note has a watermark, a metal strip in the paper, tactile relief, a hologram, microprinting, see-through register, fluorescent/invisible ink, serial letters and a control number.

Certain extra characteristics (such as the use of the colour purple) mean that they cannot be confused with genuine currency. We stock a wide range of accessories for storing your “Euro Souvenir” banknotes.

## INTERCEPT®-Box L180 for letters and postcards The box with active protection against ageing and oxidation

The L180 box actively protects your collection from ageing and oxidation thanks to the INTERCEPT® material inside. Ideal for protecting paper, coins and medallions. Suitable for postcards, letters, stockcards, documents, coin sets, etc. up to 180 x 160 mm (7 x 6 <sup>1</sup>/<sub>4</sub>") in size. Overall size: 338 x 167 x 204 mm (13 <sup>1</sup>/<sub>4</sub> x 6 <sup>5</sup>/<sub>8</sub> x 8").

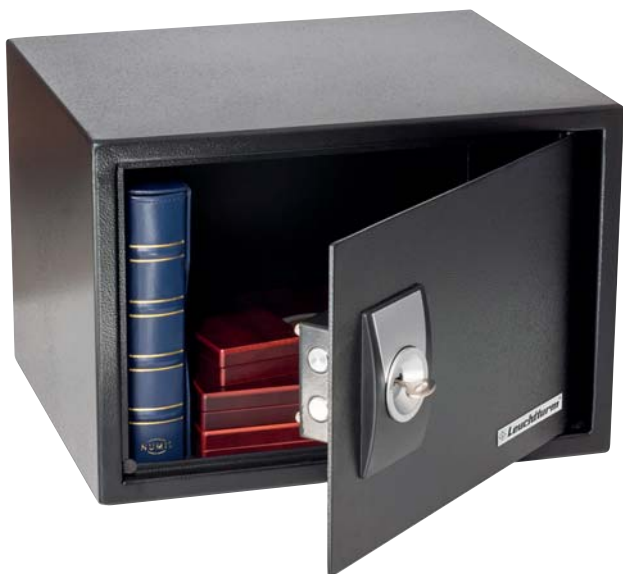

The way an INTERCEPT® box works is based on over 30 years of patented INTERCEPT® technology: The copper particles contained in the material permanently bond with corrosive gases and create a neutralised atmosphere in the shortest time possible, protecting documents and coins from ageing or tarnishing (at least 15 years guaranteed protection\*). The effect has been proven according to approved DIN, EN, ISO and ASTM standards.

Ref. No. 345 417

\* You can notice any deterioration in the effectiveness of the material if you see a dark grey to greenish discolouration of the film (not stored items!). If this happens, you should replace the INTERCEPT® product with a new one.

## Storage of SLABS (certified coin holders)/QUICKSLABS

Many American coin collectors have their coins certified by independent verification services such as the NGC\*, PCGS\* or ANACS\*. In addition to authenticity, the examined coin's standard of preservation is also established. A special feature of this grading process is the subsequent sealing of the coin inside a special square coin capsule (a "slab"). In addition to the examined coin, the "slab" also contains the certification information. The special construction of the "slab" makes it impossible for the capsule to be opened again without it being destroyed. To protect against forgery, the capsule has various additional security features, such as a hologram or a watermark.

The way an INTERCEPT® box works is based on over 30 years of patented INTERCEPT® technology: The copper particles contained in the material permanently bond with corrosive gases and create a neutralised atmosphere in the shortest time possible, protecting the coins and documents from tarnishing (guaranteed protection for up to 15 years!\*). The effect has been proven according to approved DIN, EN, ISO and ASTM standards. In order to prolong the effectiveness of the INTERCEPT® box beyond 15 years, it is recommended that you close the box immediately after use and avoid opening it frequently.

\* You can notice any deterioration in the effectiveness of the material if you see a dark grey to greenish discolouration of the film (not the coins!). If this happens, you should replace the INTERCEPT® product with a new one.

## Did you know?

### Magnifiers with 2–3X magnification

These magnifiers are suitable for viewing whole stamps and coins. The image found on the object can be easily viewed with their help and the fine details become visible. These magnifiers can also be used as a reading aid.

### Magnifiers with 5–7X magnification

The majority of details can now be identified. Unfortunately, increased magnification of the diameter lens also means reduced reading surface. The distance between the eye and the magnifier as well as between the magnifier and the object is minimised.

### Magnifiers with 10–20X magnification

You are now very close the Stamp Collectors ultimate piece with this magnification and the smallest details are visible. Individual pixels can be differentiated for the majority of printing processes. You can't get a finer detail than this.

### Microscopes

Intaglio printing becomes more vivid, microprinting can now be viewed more easily and safer, and plate flaws are more easily detectable.

### Digital microscopes

Thanks to digital technology, stamps and coins can be viewed on the screen. The software provided allows you to capture images of the objects, save them and edit the image.

### Light

A good source of light is vital but not always available. LED technology now gives light to even the smallest of magnifiers so that objects being viewed are well illuminated. You can now purchase LEDs with long-wave UV light for identifying fluorescence.

Can also be used as an inspection lamp

The LUCY ultraviolet lamp is a top-quality inspection device which provides the user with a host of tried-and-tested features as well as a number of functions. The built-in, durable ultraviolet LED has a very broad wavelength range of 254 nm (shortwave) to 390 nm (longwave), meaning that this device is able to detect and check both fluorescence and phosphorescence. Even pen cancellations on stamps or paper repairs that have been removed can be seen using the LUCY UV lamp. Furthermore, the UV LED used is extremely powerful and provides significantly better results, e.g. phosphorescence afterglow, than other forms of light. The UV lamp can be used both as a portable lamp as well as a table/free standing lamp with magnification. Thanks to a special darkening attachment, the lamp also works perfectly in bright surroundings, such as in artificial light or daylight. The attachment to create a darker environment is made of two parts, whereby one section comes with a magnifying lens (3.5x magnification), in order to be able to detect details more easily. Both attachment parts can be used together or individually. Other benefits of the LUCY UV lamp include the table/free standing casing made of hard plastic with rubberised, anti-slip sides, a push button for switching on and off the UV lamp, meaning the lamp is ideal for travelling, trade fairs and exhibitions. Battery powered (4x 1.5 V AAA batteries, not included). Overall size (excl. attachment): 145 x 85 x 25 mm (5 7/8 x 3 3/8 x 1").

The coin polishing cloth is ideal for cleaning "used" coins in circulation.

We would like to point out that "proof" or "proof-like" coins should generally not be cleaned in order to preserve their value.
